

### February 2018 Commentary and Strategy Review

#### About the Strategy

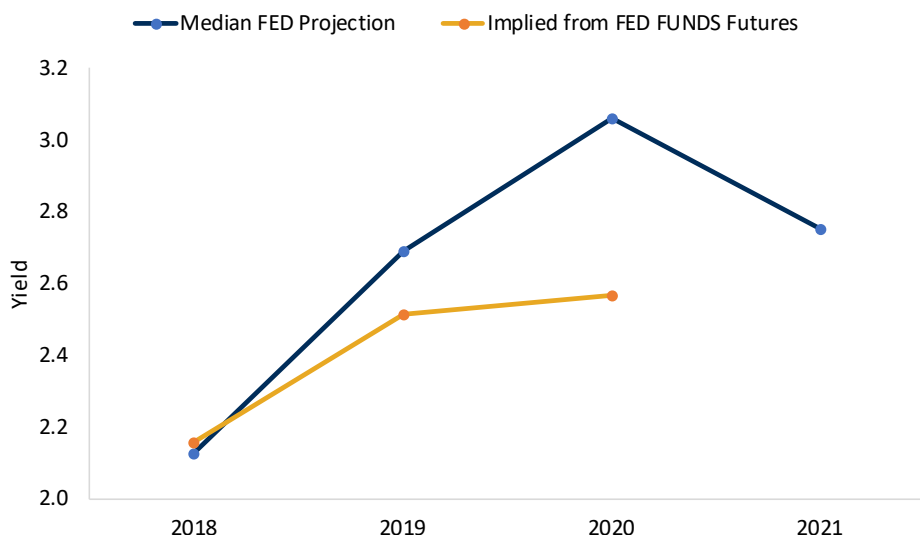

The Fixed Income Portfolio ("FI") provides market exposure across various sectors within global fixed income via exchange-traded funds. Innealta's Investment Team manages the FI strategy relative to the Bloomberg Barclays U.S. Aggregate Bond index. Innealta Capital utilizes a proprietary quantitative framework that combines traditional corporate fundamental, macroeconomic and behavioral data to produce risk and return forecasts. The Investment Team then employs those forecasts, along with trading optimization techniques and portfolio design research, to create a unique portfolio, that, in our opinion, best suits a client's risk-adjusted goals within the fixed income space.

#### Outlook

Overall, we find opportunities within fixed income attractive as the dynamics between inflation and growth affect various fixed income sectors differently. Over the medium-term, we expect tightening U.S. monetary policy to create a headwind for duration sensitive fixed income sectors. In the short-end of sovereign U.S. fixed income (i.e. maturity less than 3 years), we see the gap closing between the market and the Fed's interest rate expectations. Currently, the gap between 2019 Fed projections and the market is only 50 bps. Over the past year, the generic two-year U.S. Treasury yield increased by almost 100 bps from 1.26% as of 02.28.2017 to 2.25% as of 02.28.2018. We would expect the pace of yield increases in short-dated fixed income to slow over the next few months.

In the long-end of sovereign U.S. fixed income (i.e. maturity of ten years or greater), we expect inflation and growth dynamics to dominate. The market's concern about rising inflation has subsided from last month, but concerns about growth expectation increased during February, as financial market volatility increased. The financial market volatility, in our opinion, was mainly driven by a liquidity event, and is likely to return to average levels. Despite the increase in financial market volatility, we remain convinced in the global growth story, as both "hard" and "soft" measures of macroeconomic and corporate growth continue to increase. We do not anticipate a massive sell-off in longer-dated U.S. fixed income due to increasing growth, and because U.S. fixed income, compared to other Developed Market fixed income, appears attractive based on carry.

### Performance

During February, global financial markets experienced an episodic volatility event due to rising inflation concerns and a liquidity event in U.S. volatility ETFs. A broad measure of U.S. fixed income performance, the Bloomberg Barclays U.S. Aggregate Bond Index, returned -0.95% during February. The bar chart below shows the February 2018 total return performance for various fixed income sectors. The clear theme during the month was that shorter-duration sectors, such as floating rate and bank loans, outperformed longer-duration sectors. Given the growth concerns in the market and the simultaneous sell-off in equity markets, credit sensitive sectors underperformed the Bloomberg Barclays U.S. Aggregate Bond Index.

During February, the Innealta Capital Fixed Income Portfolio returned -1.64%, while its benchmark, the Bloomberg Barclays U.S. Aggregate Bond Index, returned -0.95%. The top two contributors to the portfolio's performance were allocations to bank loans and short-maturity bonds. The bottom two contributors to the portfolio's performance were allocations to U.S. investment grade credit and Dollar-denominated Emerging Market debt.

During the month, the investment team rebalanced the portfolio to take advantage of potential opportunities. The portfolio initiated and increased allocations in short maturity, floating rate debt, bank loans, and local currency Emerging Market debt. The portfolio reduced positions in municipals, TIPS, USD-denominated Emerging Market debt, investment-grade credit, and long-dated U.S. Treasuries. Overall, the Investment Committee reduced the duration risk in the portfolio. A more detail explanation of the rebalance can be found [here](#) and [here](#).

**Disclosures & Important Information**

The U.S. Dollar is the currency used to express performance. The strategy includes portfolios charged bundled or wrap fees and portfolios charged transaction fees or trading costs. Bundled fee portfolios pay a fee based on a percentage of assets under management in place of a transaction fee. They include the advisor's fee and, in most cases, also include a fee for investment management and portfolio monitoring. Live returns are presented net of management fees, gross of withholding taxes on any dividends, interest or capital gains, and include the effects of trading costs and reinvestment of all income. Net of fee performance was calculated using actual management fees charged to the client. Gross returns are shown as supplemental information, include the effects of the reinvestment of all income, and are stated gross of all fees except for transaction fees, when charged.

Past performance is no guarantee of future results.

**Investing involves risk, principal loss is possible, and there can be no assurance that investment objectives will be achieved. Past performance is not indicative of future results. Exchange traded funds (ETFs) are subject to risks similar to those of stocks, such as market risk, and investors who have their funds invested in accordance with the portfolios may experience losses. Additionally, fixed income (bond) ETFs are subject to interest rate risk, which is the risk that debt securities in a portfolio will decline in value because of increases in market interest rates. Investments in foreign investments may incur greater risks than domestic investments. For more information on the risks associated with investment in ETFs, please refer to AFAM Capital's Form ADV Part 2A.**

Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Actual investment management fees will vary, beginning at 1.5% per annum. Our full management fee schedule is described in more detail in AFAM's Form ADV Part 2A.

**Alpha** is a measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. **Beta** is a measure of volatility, or systematic risk, of a portfolio in comparison to a benchmark. A beta greater than one indicates more volatility, while a beta less than one indicates less volatility than the relevant benchmark. **Annualized Standard Deviation** is a measure of the dispersion of investment returns from the mean. A higher standard deviation indicates higher volatility. **R Squared** is a measure of how close the relationship is between a portfolio and its benchmark.

For comparison purposes, the strategy is measured against the Bloomberg Barclays US Aggregate Bond Index.

"Barclays Agg" refers to **The Bloomberg Barclays US Aggregate Bond Index** which is representative of the entire universe of taxable fixed-income investments. It includes issues of the US Government and any agency thereof, corporate issues of investment grade quality (Baa/BBB or better), and mortgage-backed securities. "Treasury 2yr" refers to the **The Merrill Lynch 2-year U.S. Treasury Futures Total Return Index** which measures the performance of a fully collateralized rolling 2-year U.S. Treasury futures position. "Treasury 5yr" refers to **The Merrill Lynch 5-year U.S. Treasury Futures Total Return Index** which measures the performance of a fully collateralized rolling 5-year U.S. Treasury futures position. "Treasury 10yr" refers to **The Merrill Lynch 10-year U.S. Treasury Futures Total Return Index** which measures the performance of a fully collateralized rolling 10-year U.S. Treasury futures position. "Treasury 30yr" refers to **The Merrill Lynch 30-year U.S. Treasury Futures Total Return Index** which measures the performance of a fully collateralized rolling 30-year U.S. Treasury futures position. "US High Yield" refers to **The iBoxx USD Liquid High Yield Index** which is an index composed of U.S. dollar-denominated, investment-grade corporate bonds. "TIPS" refers to **The Bloomberg Barclays US Treasury Inflation Notes TR Index Value Unhedged USD Index** which consists of inflation-protection securities issued by the US Treasury. They must have at least one year until final maturity and at least \$250 million par amount outstanding. They are rated investment grade by at least two of the following rating agencies: Moody's, S&P, Fitch. They must be fixed rate, dollar denominated and non convertible. "US Munis" refers to **The S&P Municipal Bond Index** which is a broad market value weighted index that seeks to measure the U.S. municipal bond market. "US Invest Grade" refers to **The iBoxx Investment Grade Index**, which is composed of U.S. dollar-denominated, investment-grade corporate bonds. "US Mortgage" refers to **Bloomberg Barclays US MBS Index Total Return Value Unhedged USD**, which measures the performance of investment grade fixed-rate mortgage-backed pass through securities of GNMA, FNMA, and FHLMC. "US Agency" refers to the **Barclays U.S. Agency Index**, which measures performance of callable and non-callable agency securities issued by US government agencies, quasi-federal corporations, and corporate or foreign debt guaranteed by the U.S. government. "EM sovereign" refers to the **JPMorgan EMBI Global Core Index**, which measures a broad, diverse U.S. dollar denominated emerging market debt instruments. EM High Yield" refers to the **Morningstar Emerging Markets High Yield Bond Index**, which tracks the performance of the below-investment grade U.S. dollar denominated emerging market sovereign and corporate bond market. "Bank Loan" refers to the **S&P/LSTA U.S. Leveraged Loan 100 Index**, which measures the performance of the largest facilities in the leveraged loan market. "CMBS" refers to the **Bloomberg Barclays U.S. CMBS Investment Grade Index**, which measures the market of conduit and fusion CMBS deals with a minimum current deal size of \$300 million. "Floating" refers to the **Bloomberg Barclays US FRN <5 Years Index**, which is a subset of the US Floating-Rate Note (FRN) Index, which measures the performance of USD denominated, investment grade, floating-rate notes across. "US ST High Yield" refers to the **Markit iBoxx USD Liquid High Yield 0-5 Capped Index** which tracks exposure to liquid high yield corporate bonds maturing between 0 and 5 years. "US 5yr BE, US 10yr BE, and US 30yr BE" refers to the **US Breakeven Indices**, which measure the breakeven inflation rate by subtracting the real yield of the inflation linked maturity curve from the yield of the closest nominal Treasury maturity. The result is the implied inflation rate for the term of the stated maturity.

It is not possible to invest directly in an index. Blended benchmarks are calculated daily and rebalanced quarterly.
